Ideation Phase

Project Name: Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

Step 1: Team Gathering, Collaboration and Selecting the Problem Statement

The team discussed challenges in understanding housing market trends from raw datasets. Manual analysis makes it difficult to identify pricing patterns, renovation impact, and housing feature relationships. The team selected Tableau to create interactive dashboards and stories for effective decision-making.

Selected Problem Statement: Housing data contains complex patterns that are difficult to interpret using traditional methods. An interactive Tableau dashboard is required to visualize sale prices, renovation trends, basement area, and housing features for better insights.

Step 2: Idea Listing and Grouping

Group	Ideas
Data Preparation	Collect Kaggle dataset, clean data, create calculated fields
Visualization	KPIs, bar charts, pie charts, feature distribution charts
Dashboard	Interactive dashboard with filters and responsive layout
Storytelling	Tableau Story to present insights sequentially
Web Integration	Embed Tableau dashboard in Flask web application

Step 3: Idea Prioritization

Idea	Impact	Feasibility	Priority
Interactive Tableau Dashboard	High	High	Top
Data Cleaning & Calculated Fields	High	High	Top
Storyboard	High	Medium	Top
Flask Web Integration	Medium	Medium	Medium
Static Reports Only	Low	High	Discarded
